# Atomos unveils X-Ray Vision filter for Ninja TX monitor-recorders

Today we announced a groundbreaking new feature for our new Ninja TX series of monitor-recorders: an **X-Ray Vision filter** that “reveals what traditional sensors simply cannot.”

Installed with special firmware update **AtomOS 01.04**, the new filter uses NASA-developed advanced speculative imaging algorithms to simulate the look of X-ray cinematography in real time. The result is a tool that allows filmmakers to “peer beneath surfaces, fabrics, and even narrative structure.”

“We asked ourselves: what if exposure tools weren’t limited to zebras and false color?” commented the visibly enthusiastic (and possibly sleep-deprived) product manager, Billy Röntgen. “What if you could actually see the emotional skeleton of your scene? And what if you could make every film look like **Total Recall**? How cool would that be?”

**Ninja TX-Ray**, accessible via a new Quantum Tools menu, overlays a skeletal-like visualization on subjects, complete with what Atomos describes as “AI-interpreted bone density mapping.” In demonstrations, actors appeared as glowing outlines with suspiciously accurate ribcages - though occasional glitches replaced limbs with what looked like C-stands.

Billy added that this is just the beginning of Atomos’ ‘Imagination-Driven Imaging’ initiative. Future updates may include a Thermal Drama mode to visualize tension between characters and a Lens Flare Predictor that adds flares before you even point the camera at a light source.

## CASE STUDY

# Shooting on the slopes

Pete Elliott took the **Ninja TX GO** on a demanding ski shoot in Austria, where long days, bright snow glare, and steep terrain put every part of his kit to the test. Learn how the monitor's lightweight build, bright display, and touch-to-focus feature helped him stay on top of the action.

## CASE STUDY

# A cut above the rest

Richard Ross went from working as a full-time arborist to building a career behind the camera. What started with a GoPro on YouTube has grown into a production company creating commercials and documentaries. Today, his Sony FS7 paired with **Ninja** has become his trusted setup for delivering clear, consistent images.

## EVENT

# Join us at NAB Show 2026

If you're heading to this year's NAB show (19-22 April), make sure to stop by the Atomos booth (#C4731). We'll have the entire new Ninja range on display - **Ninja RAW**, **Ninja TX GO**, and **Ninja TX**, along with the **Shogun AV-19** - all ready for hands-on demos.

And maybe some new stuff too!

You could also win a **Shinobi II** or **Ninja RAW** in our free to enter daily prize draw. See you there!

## Share your story

We're always adding new creator stories to our website. If Atomos is part of your latest project, we'd love to hear from you!
